Summary

Python developer focused on backend systems and Telegram bots. Worked with Python, Django, python-telegram-bot, PostgreSQL, and SQLite — built a production Telegram bot currently serving 2,100+ daily users, a desktop CRM for an auto-parts shop, and a web CRM/POS system for an auto service. All projects are personal / pet — I have no commercial experience yet. Completing a Master's in Computer Engineering at MAUP and looking for a Junior Python Developer role to gain commercial experience in a strong engineering team.

Skills

Languages: Python, C++, SQL, JavaScript

Backend: Django (ORM, admin, management commands), python-telegram-bot, asyncio, REST API integration, PostgreSQL, SQLite

Frontend: HTML, CSS, Tailwind CSS, vanilla JavaScript, responsive design

Tools: Git, GitHub, PyCharm, VS Code, pgAdmin, Tkinter, matplotlib, ngrok

Concepts: OOP, CRUD, role-based access control, caching, environment-based config, deployment basics

Spoken: Ukrainian — Native | English — A2 (improving)

Projects (personal / pet)

All projects below were built on my own time — I haven't worked commercially yet. They were made to learn the stack, solve real problems for friends / small businesses, and ship something useful.

Blackout Schedule Bot — Pet Project · Production

2025 — Present

Python · python-telegram-bot · matplotlib · SQLite · asyncio

- Designed and deployed a Telegram bot serving 2,100+ daily active users with personalised Ukrainian power-outage schedules.
- Generated live hour-by-hour timeline charts with matplotlib showing the current time position and outage windows per energy group.
- Implemented admin analytics: new-user notifications, daily-growth tracking, total user counter, real-time chat-id capture.
- Maintained 99%+ uptime since launch; source private, currently in production.

STO "Gerat" — Auto Service CRM & Shop — Pet Project

2026

JavaScript · HTML · CSS · Chart.js · REST API

- Web CRM for a real auto-repair shop: service catalog (200+ jobs), invoice builder, shop module with stock counters and receipt printing.
- Built an analytics tab with revenue/orders charts, top services, top clients.
- Implemented role-based access (Admin / Cashier) with a dark-themed responsive UI.
- Source: github.com/OleksanderZabila/gerat

Personal Portfolio Website — Pet Project

May 2026

Django · Tailwind CSS · GitHub API · Telegram Bot API · WhiteNoise

- Built a single-page portfolio site from scratch with 6 Django models and a fully customised admin panel.
- Integrated the GitHub REST API with 1-hour file-based caching to auto-sync 19+ repositories and language statistics.
- Wired Telegram notifications for contact-form submissions using the Bot API with HTML-formatted messages.
- Implemented dark-neon UI with animated gradients, scroll-reveal, typewriter effect, and project image galleries.
- Source: github.com/OleksanderZabila/portfolio

Auto Pidkliuch — Inventory Management System — Diploma / Pet Project

Feb 2025 — May 2025

Python · PostgreSQL · Tkinter · psycpg2

- Designed an 8-table normalised PostgreSQL schema for an auto-parts store covering products, suppliers, customers, and sales.
- Implemented full CRUD across 4 core entities and a role-based access control system (Admin / Cashier).
- Built a Tkinter analytics dashboard for daily sales tracking and reporting; reduced inventory lookup time from manual to under 1 second.
- Owned the project end-to-end from schema design through GUI to handover.

Weather Forecast Telegram Bot — Pet Project

Dec 2023

Python · python-telegram-bot · matplotlib · OpenWeather API

- Built a Telegram bot delivering daily forecasts with matplotlib-rendered temperature charts.
- Implemented command parsing, per-user city storage, and graceful API error handling.
- Source: github.com/OleksanderZabila/weather_telegram_bot-master

Transcriber Bot — Interview Challenge / Pet Project

Oct 2025

Python · python-telegram-bot · speech-to-text

- Telegram bot accepting voice/audio messages and returning transcribed text, built as a take-home interview task.
- Source: github.com/OleksanderZabila/transcriber-bot

Education

Master's in Computer Engineering — Interregional Academy of Personnel Management (MAUP) 2021 — 2027

(expected)

Specialty 121 · Online · Bachelor's completed within the same program · Cherkasy, Ukraine

English Language Courses — Online

2024 — Present

Current level: A2, actively improving for international team collaboration.
